

Water project in Gaza

Did you know Gaza is literally 'Dying' - ? Polluted and salty water, and chronic shortage of safe drinking water cause serious heart and kidney related diseases. Almost all children in Gaza are suffer from parasites in their intestines.

Why? The man-made disaster: Israeli occupational forces prohibit the digging of wells, and municipal tap water is too salty.

The installation of a water desalination system can turn this desperate situation. Thanks to donations from people all over the world, our fundraising efforts since 2017 have now reached 10,000 €/12,000\$, the amount for one device!

Our members will travel to Israel in April to initiate this project.

A local doctor Dr. Ahmed Tawahina has been responsible for starting this project. Since his death, his daughter has been taking charge of it and will oversee the installation of the device and its maintenance. He has set up healing camps for children and students suffering from mental illnesses and injuries from Israeli bombings. With this water purification project we can bring more security to their lives as well as the residents of the quarter. The fundraising efforts for a second water desalination device will continue through crowdfunding (please see below).

Dr. Ahmed Tawahina

Giving heart can change the situation, creating a new reality.

Let's spread the hope and joy of life!
